DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are generally narrative and indefinite, failing to conform with current U.S. practice. They appear to be a literal translation into English from a foreign document and are replete with grammatical and idiomatic errors. Specifically, it is unclear what the terms "to-be disk" and "to-be rim" parts are.

Regarding claim 3, there is insufficient antecedent basis "the upper and lower molds" in the claim. Also, the limitation "a sharp-angled ridge" is unclear - are the molds pressed together to make the ridge on the workpiece or do the molds themselves have a ridge?

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by McCloskey (US Patent 4,450,703), as best understood. McCloskey discloses a method of manufacturing a

lightweight metal product (2) comprising heating the intermediate product (by induction coil 14); then rotating the intermediate product with stopping of the rotating at interval of a predetermined angle; pressing at least a portion of the product by molds at the time of the stopping; repeating of such rotating, stopping and pressing as to give a pattern on the whole of the part; and further press processing and finish processing (Figure 3, Column 3, lines 50+ - Column 4). The lower mold (34) has recesses (38) at places corresponding to portions of the intermediate product, which are to be pressed by a press device and the portions are moved downward at a time of the pressing, Figure 5. With regards to claim 3, as best understood McCloskey discloses at least a portion of the upper and lower molds makes a sharp-angled ridge, see Figure 5, reference signs 32 and 42.

4. Claim 5 is rejected under 35 U.S.C. 102(b) as being anticipated by Kato et al. (US Patent 5,092,040). Kato et al. discloses a wheel, see Figure 7.

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Teresa M. Bonk whose telephone number is (571) 272-1901. The examiner can normally be reached on M-F 9:00 AM - 5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Banks Derris can be reached on (571) 272-4419. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
